

① $f(x) = |4^{x-1} + 3|$

② $f(x) = \log_5\left(-\frac{|x|}{5} + 4\right)$

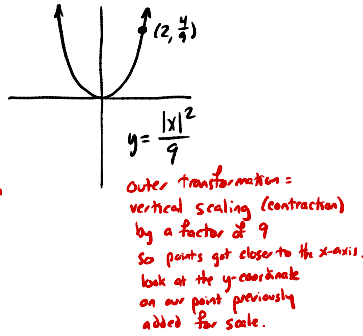

③ $f(x) = \frac{1}{4|x|} - 2$

④ $f(x) = \left| \log_4\left(-\frac{x}{5}\right) \right|$

⑤ $f(x) = -\frac{|x|^2}{9}$

⑥ $f(x) = \frac{1}{3|x|-1}$

It got more narrow!
Look at the x-coordinates associated with the vertical asymptote and the point previously added for scale

⑦ $f(x) = (-\frac{x}{4} - 3)^2$

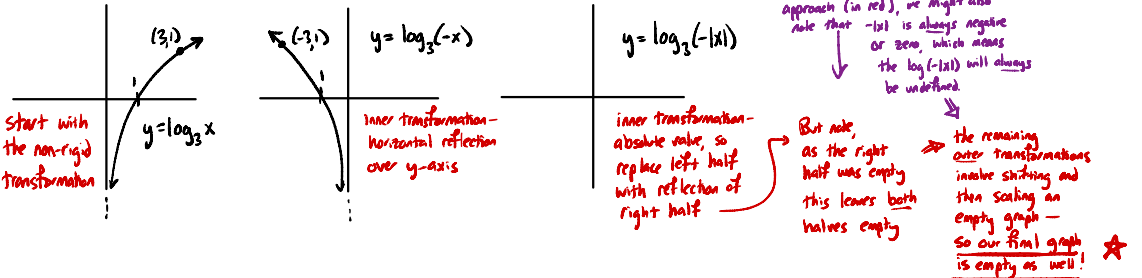

⑧ $f(x) = 5|-x-1|^4$

⑨ $f(x) = -4^{5x+4}$

⑩ $f(x) = 4(\log_3(-|x|) + 4)$

⑪ $f(x) = 5 - \sqrt[3]{|x|}$

⑫ $f(x) = -\frac{1}{|x|} - 5$

⑬ $f(x) = \frac{1}{-|x|+4}$

⑭ $f(x) = |2-5x|^2$

⑮ $f(x) = \frac{|x-2|^4}{5}$

16) $f(x) = -2 \log_6(|x|) - 3$

Start with the non-rigid transformation

for scale

inner transformation - absolute value, so replace left half with reflection of right half

outer transformation - vertical scaling - dilation by factor of 2 (note the y-coordinate on our point added) for scale

outer transformation - vertical reflection over the x-axis

inner transformation - vertical translation by 3 units (down)

$$\begin{aligned}
 -2 \log_6(|x|) - 3 &= 0 \\
 -2 \log_6(|x|) &= 3 \\
 \log_6(|x|) &= \frac{3}{-2} \\
 |x| &= 6^{-3/2} \\
 &= \frac{1}{\sqrt[2]{6^3}} = \frac{1}{\sqrt[2]{216}} = \frac{\sqrt[2]{6}}{6} \\
 x &= \pm \frac{\sqrt[2]{6}}{6}
 \end{aligned}$$

17) $f(x) = \frac{|2-x|^5}{32}$

Start with non-rigid transformation

for scale

inner transformation - absolute value so replace left half with reflection of right half

inner transformation - horizontal translation by 2 (left)

inner transformation - horizontal reflection over y-axis

outer transformation - vertical scaling, a contraction by a factor of 32 (note the y-coordinate on the point added) for scale

18) $f(x) = -\frac{|x-5|^5}{32}$

Start with non-rigid transformation

for scale

inner transformation - absolute value so replace left half with reflection of right half

inner transformation - horizontal translation by 5 units (right)

outer transformation - vertical scaling, a contraction by a factor of 32

outer transformation - vertical reflection over x-axis
